Jesse -

Hopefully we worked out these issues during our discussion this afternoon. I have alerted EPA mgmt to this situation, and will speak with Steve Chang at HDOH tomorrow a.m. I think we can make this work-

Subject: Waste Acceptance at Waimanalo Gulch LF

Kathy,

Despite us all being out on the landfill together yesterday with HDOH present, there seems to be a great deal of confusion on HDOH's end of things pertaining to being able to open up the eastern area of Cell E6 for waste acceptance. Tom Miyashiro has been calling our CQA consultant AECOM to say that they need to have 24 hrs to review any QC report information we will be submitting. He also stated that based on this schedule he would need this CQA report information by tomorrow if we are to put waste in the area on Thursday as we have been discussing. Based on the steps that have to be taken to restore the area to pre-storm conditions, we need part of the day on Wednesday to

complete installation of the various drainage gravel and operations layers. Tom also stated that Friday is a furlough Friday for HDOH, so they won't be available. I am worried about getting in the cell to place waste. It seems they are strictly enforcing/interpreting their own permit conditions on this matter. I'm confused because WM is under the impression that EPA and NOT HDOH has the say in if and when we go into the cell based on our conversations with you.

Can you please call me asap to discuss on my mobile? 808-250-0574

If you would like to call Tom Miyashiro, his mobile number is 808-722-5773

Thanks,

Jesse Frey
